## RESEARCH EXPERIENCE

### Controllable Lesion Data Synthesis

1. **Chest X-ray Lung Nodule Synthesis for Lung Nodule Detection** 2020 – 2022
  - Proposed an inpainting-based lung nodule synthesis network and a synthetic sample selection network to select effective synthetic samples for augmenting lung nodule detection. This work was accepted by *PRCV 2021*.
  - Proposed a lung nodule synthesis framework that disentangles nodule attributes (*i.e.*, shape, size, and texture) and synthesize nodules in a controllable manner, and leveraged such controllability to design a hard example mining strategy for augmenting lung nodule detection. This work was accepted by *Medical Image Analysis*.
2. **Cervical Cytological Image Synthesis for Cervical Abnormality Screening** 2022 – 2024
  - Proposed CellGAN, a conditional GAN that generates cytological images of various cervical cell types including NILM, ASC-US, ASC-H, LSIL, and HSIL cells for augmenting patch-level cervical cell classification. This work was accepted by *MICCAI 2023 (early accept)*.
  - Incorporated CellGAN into a knowledge distillation framework for multi-class cervical cell detection, which facilitates the class-balanced pre-training of a teacher network. This work was accepted by *Neural Networks*.

### Cross-modality Medical Image Synthesis

1. **PET Image Synthesis for Parkinson's Disease (PD) Diagnosis** 2023 – 2025
  - Propose a two-stage framework that synthesizes  $^{11}\text{C}$ -CFT PET images from real  $^{18}\text{F}$ -FDG PET scans for multi-modal PD diagnosis, which was based on the correlation between dopaminergic deficiency in the striatum and increased glucose metabolism in PD patients. This work was accepted by *European Journal of Nuclear Medicine and Molecular Imaging*.
  - Proposed a Metabolism-aware Anomaly Detection (MetaAD) framework, which leverages a cyclic modality translation workflow to identify metabolism anomalies of PD in  $^{18}\text{F}$ -FDG PET scans. This work was early accepted by *MICCAI 2024 (Young Scientist Award)*.

2. **Whole-body MR-to-CT Synthesis for PET Attenuation Correction** 2023 – 2025
- Proposed a whole-body MR-to-CT synthesis framework that integrates structural guidance, spatial alignment, and semantic constraint to enhance synthetic CT image quality, thus facilitating PET attenuation correction in whole-body PET/MR Imaging. This work was accepted by *Medical Image Analysis*.

## Medical Image Quality Enhancement

1. **MRI Super-resolution for Arbitrary MRI Inter-Slice Spacing Reduction** 2022 – 2023
- Proposed HiFi-Diff, a diffusion model for arbitrary MRI inter-slice spacing reduction in the through-plane direction by generating in-between MR slices from adjacent MR slices. This work was accepted by *MLMI 2023*.
