## RESEARCH EXPERIENCE

**Chest X-ray Lung Nodule Synthesis for Lung Nodule Detection**                *2020 – 2022*

- Proposed an inpainting-based lung nodule synthesis network and a classification-based sample selection network to select effective synthetic samples for augmenting lung nodule detection.
- Proposed a lung nodule synthesis framework that disentangles nodule attributes (*i.e.*, shape, size, and texture) and synthesize nodules in a controllable manner. Leveraged the controllability of the framework to design a hard example mining strategy for data augmentation on lung nodule detection.
- One paper accepted by ***PRCV 2021***; one paper accepted by ***Medical Image Analysis***.

**Cervical Cytological Image Synthesis for Cervical Lesion Screening**                *2022 – 2024*

- Proposed CellGAN, a conditional GAN that generates cytological images of various cervical cell types including NILM, ASC-US, ASC-H, LSIL, and HSIL cells for augmenting patch-level cervical cell classification.
- Incorporated CellGAN into a knowledge distillation framework for multi-class abnormal cervical cell detection, which facilitates the class-balance pre-training of a teacher network.
- One paper accepted by ***MICCAI 2023 (early accept)***; one paper accepted by ***Neural Networks***.

**Cross-Modality PET Image Synthesis for Parkinson's Disease (PD) Diagnosis**                *2023 – 2024*

- Propose a two-stage framework that synthesizes $^{11}$C-CFT PET images from real $^{18}$F-FDG PET scans for automatic PD diagnosis, which was based on the correlation between dopaminergic deficiency in the striatum and increased glucose metabolism in PD patients.
- Proposed a Metabolism-aware Anomaly Detection (MetaAD) framework, which leverages a cyclic modality translation workflow to identify metabolism anomalies of PD in $^{18}$F-FDG PET scans.
- One paper accepted by ***MICCAI 2024 (early accept)***; one paper submitted to ***npj Digital Medicine*** *(in submission)*.

**Whole-body MR-to-CT Synthesis for PET Attenuation Correction**                *2023 – 2024*

- Proposed a whole-body MR-to-CT synthesis framework that integrates structural guidance, spatial alignment, and semantic authenticity to enhance synthetic CT image quality, thus facilitating PET attenuation correction.
- One paper submitted to ***IEEE Transactions on Medical Imaging*** *(in submission)*.

**MR Image Super-resolution for Arbitrary Inter-Slice Spacing Reduction**                *2022 – 2023*

- Proposed HiFi-Diff, an MR image super-resolution diffusion model for arbitrary reduction of inter-slice spacing, which generates any desired in-between MR slice from hierarchical features of adjacent MR slices.
- One paper accepted by ***MLMI 2023***.
